

**San Gabriel Valley
Cactus & Succulent Society**

COMMUNIQUE

An Affiliate of the Cactus & Succulent Society of America, Inc.

April 2014 - Volume 47, Number 4

**April Meeting:
Thursday,
April 10 at 7:30 pm**

Meetings are held on the
2nd Thursday of the month
at **7:30 pm** in Ayres Hall,
Los Angeles County Arboretum,
Arcadia.

Mini-Show Plants:

CACTUS:
Variegated

SUCCULENT:
Variegated

C&S Workshop:

The Workshop will meet on Wednesday, April 16th in the Palm Room, Los Angeles County Arboretum at 7:30 pm. The topic will be:

Spring Seed Workshop

Material in the **COMMUNIQUE** publication may be reprinted by nonprofit organizations (unless such permission is expressly denied in a note accompanying the material) provided proper credit is given to the SGVCSS and the author, and that one copy of the publication containing the reprinted material is sent to the editor. Reproduction in whole or part by any other organization or publication without the permission of the publisher is prohibited.

President's Message

As you may know, we had some internet problems and our website was down for a few days. It's working fine now. However, if the site goes down again we have a mirror site at <http://desertsong.com>.

Thirty-nine folks were able to join us on our recent bus trip to the Living Desert and Sunnylands. We all had a good time. Our return trip was made more interesting thanks to our "Mr. Toad's Wild Ride" bus driver. A special thanks to Jeane Mullens for helping organize the trip.

Our next trip will be to the San Diego summer show on June 7th. We may make a short stop at San Diego County's Waterwise Botanicals Nursery which is hosting a two-day Succulent Celebration, on Friday and Saturday, June 6 -7. The cost of the bus trip is \$10. Admission to the show is free. If you would like to make a reservation you may do so at the next meeting or by emailing me at geisel@citruscollege.edu.

Just as a reminder, our Anza-Borrego overnight trip has been postponed. We will try again at some future time.

On April 16th we will hold our annual Spring Seed Workshop. This is one of your most popular workshops! The meeting starts at 7:30 p.m. in the Palm Room. And don't forget – there is always an informal raffle; everyone takes home a plant or plant cuttings. We hope to see you there. A special thanks to Joe Clements who made the March California Natives C&S workshop so enjoyable and informative.

March Mini-Show Results

Cactus - Rebutia, Sulcorebutia, Weingartia

Novice

- 1st Jose Esparrago Sulcorebutia aranacea
- 2nd Jose Esparrago Rebutia krainziana
- 3rd Minh Au Rebutia fulvasita
- 3rd Minh Au Rebutia vulpina

Intermediate

- 1st Rita Gerlach Weingartia saipinensis
- 2nd David Hawks Sulcorebutia candiae

Masters

- 1st John Matthews Sulcorebutia mentosa
- 2nd Frank Nudge Sulcorebutia candiae/
Rebutia glomeriseta
- 3rd John Matthews Sulcorebutia candiae
- 3rd Cindy Arakaki Rebutia heliosa

Succulent - Echeveria

Novice

- 1st Nilda Howard E. agavoides
- 2nd Fred Parrales E. x Neon Breaker
- 3rd Fred Parrales E. hybrid

Intermediate

- 1st Tom Howard E. Ebony
- 2nd Rita Gerlach E. agavoides

Masters

- 1st John Matthews E. subrigida "Fire & Ice"
- 2nd John Matthews E. cante
- 3rd John Matthews E. elegans "Super Clone"

Mini-Show Judges Signup

Pete Kimbrell will assist Head Judge Manny Rivera in judging the entries for this month's Mini-Show.

Be sure to take a look at the Club's website at www.sgvcss.com. Thanks to Gunnar Eisel for managing our website. If you wish to receive your **COMMUNIQUE** on-line please notify the editor at yvonne@pricklypalace.com.

President's Message (cont. from page 1)

Our April speaker is Kelly Griffin. Kelly holds a degree in Applied Physics from UCSD, but his love for plants has led him to such positions as curator of Xerophytes at Rancho Soledad Nurseries and currently as Plant Research and Developer at Altman's Plants. Kelly has led many expeditions to South Africa, Madagascar, Yemen, Socotra, Argentina, Chile, Bolivia, Mexico, and Peru. His presentation will be on his recent trip to Mexico. Don't miss this one!

See you at the meeting.

Gunnar Eisel

This Month's Program

"Mexico - Visiting Old Friends and Making New Ones"

Kelly Griffin

This past year in addition to going to other places in the world, I have made three trips to Mexico with at least two more planned. This talk will be about those excursions.

It is new so a little unpolished but that's half the fun, right? I traveled the length of Baja and to several of the islands but that is just a part of the talk. I also traveled to Sonora, Mexico and jumped over to the state of Nuevo Leon to see the delights in the Lampedoz Mountains.

It is an adventure of people and plants....mostly plants! Expect to see Agaves, Dudleyas, Echeverias, Cactus and even a few Cycads!

Member plant sale - Oscar Flores

April 26th & 27, 9 am to 5 pm
6146 Cleon Ave., North Hollywood, 91606

The sale will include a small auction on Saturday that will conclude at 2 pm. Please contact Woody Minnich at 661-406-9816 or by email at cactusdata@msn.com for more information. Oscar has been collecting for over 20 years and has a large selection of most genera. Buy one or a bunch, all at wholesale rates. Something for everyone!

Refreshment Signup

Fred Parrales
Lynn Olson
Deanna Catalano
Yvonne Hemenway
Roberta Eisel

The first five club members who sign up and bring refreshments each month will receive a **FREE** plant as thanks.

C&S Workshop

Wednesday, April 16th • Spring Seed Workshop

The study group is an informal, hands-on learning experience that is fun for expert and novice alike. Come and learn from the experience of others. We are always happy to share our knowledge.

Meetings are held the 3rd Wednesday of the month at 7:30 pm in the Palm Room at the LA County Arboretum, 301 N. Baldwin Avenue, Arcadia.

Review of January-February 2014 CSSA Journal by Tim Harvey

Volume 86 begins with a clarification of the identity of *Agave giganteus* by Robert Webb and Gregg Starr. The article well illustrates the differences between this species and *Agave sobria* from the same area, with which *A. giganteus* has been confused.

Gideon Smith and Estrela Figueiredo give us a guided tour of the Hanbury Gardens (also known as La Mortola) in Italy.

Two new species of *Avonia* are created by Graham Williamson's article, where he elevates them from subspecies level to full species.

Featured on the cover is a beautiful specimen of *Pediocactus nigrispinus*, one of many shown in Dixie Dringman's article on them in habitat on the land owned by Dave Bishop in Washington State. Duke Benadom's Super Succulents features a highly contrasting pair this month, a bizarre *Astrophytum* cultivar and *Lithops lesliei*.

Sharp eyes and a convenient place to sit resulted in the discovery of *Sedum minimum* in Veracruz, Mexico, a new record for the state, documented by Miguel Chazaro and co-workers.

Root Gorelick brings the issue to an end with an account of *Sclerocactus parviflorus* growing along the trails in Arches and Canyonlands National Parks. Root has also been busy completing Haseltonia 19, which amongst many interesting, has a must-read article on *Huernia* by Darrel Plowes. If you didn't order a copy when you renewed your membership, now is the time to do so.

Cindy Arakaki, Librarian

Plants Of The Month

Enter your specimen plants in our monthly minishow. It will help you prepare for the real shows and give you an additional opportunity to show others your pride and joy. If you don't have any of these species of plants you can learn about them at the meeting.

CACTUS & SUCCULENTS OF THE MONTH — *Varietates*

All variegates are mutants. Something has gone wrong with the cellular structure of the leaf or stem growth tip (apical meristem) of the plant. As a result of this mutation, chlorophyll is missing from some or all layers of the plant epidermis.

Variegation is known in most plant families, and variegated plants have a place in most gardens. The bright yellow and white of variegated foliage adds pattern and rhythm to many herbaceous borders. In succulent plants variegates are generally separated from normal plants, and compete against other variegates to put them on an equal footing. Variegated plants grow slower and are generally smaller than non-variegates of the same species. Colored areas are also generally weaker, and more susceptible to fungus, sunburn and other defects. A large well grown variegate of any species is truly an achievement.

Great Variegates

Agave – A striking form of *Agave truncata*, a common garden *Agave*, is well known but since it is slow to propagate, is not generally affordable. There are several forms of variegated *Agave americana*. There are forms with a green center stripe and yellow edges, a yellow stripe and green edges, a green center and white edges, a white center and green edges, yellow centers and crinkled edges, random yellow and green banding, and dozens more. Other species of *Agaves* have also produce variegates, with the same variety of variegation.

Cacti - variegates can be found in many genera. *Gymnocalycium* are the most often seen, but some

Variegated *Gymnocalycium*

columnar variegates and some *Ferocactus* variegates are also common in cultivation. The odd variegate appears in many seedling batches. Variegated *Turbincarpus*, *Astrophytum*, *Matucana* and *Ariocarpus* have been seen at some of recent shows.

Many of these are artificially propagated by grafts.

Variegated *Monstrose Lobivia*

The famous 'Red Caps' and 'Yellow Caps' are *Gymnocalycium* or *Lobivia* variegates that have no

chlorophyll at all, and live only by being grafted onto a root stock. These are harder to grow well than they appear.

Sansevieria - There are dozens of named and unnamed varieties. Look for Bantel's Sensation, Futura, Silver Moon, Silver Princess, and variegated varieties of some of the cylindrical forms. Unlike normal *Sansevierias*, these can be difficult to grow. They will not tolerate cold and wet conditions. *Sansevieria* variegates can only be propagated through the tuber. Cuttings of the leaves will root, but will almost always revert to an unvariegated form. On the other hand, normal *Sansevierias* will often put out a variegated pup. These should be removed from the main plant and grown on their own roots to preserve the variegation.

Gasteria -

The Japanese have made an art of *Gasteria* and *Haworthia* variegated cultivation. Read the 2000 CSSA Journal for just a sampling of the wonderful cultivars. Miniature white species, yellow species, even

Gasteria armstrongii Variegate

the occasional pink can be found. There are dozens of variegated *Gasterias* shown at our shows, and available from all of the local vendors. Look for *Gasteria* 'Little Warty', a nice white and green species, as well

as many of the yellow and green species such as the Japanese hybrid *Gasteria* 'shozodan'.

Euphorbia - A number of columnar variegates are available, *E. ammak*, being one most often seen. There are also some cristate and monstrose variegates as well.

Haworthia - 'Gray Ghost' is a *Haworthia retusa* variegate. There are several *Haworthia limifolia* variegates that look as if they were painted with mustard. Offsets are produced on the flower stalks, these are variegated, as are the flowers themselves.

Crassulaceae - *Aeonium* 'Kiwi' is only one of the many variegates found and propagated in this large family.

Aeonium 'Kiwi' Crested Variegate
